File Compatibility

Image Formats:

- png
- gif
- jpg / jpeg
- bmp
- tif
- tga
- webp

Audio Formats:

- mp3
- ogg
- wav
- flac
- aif

Video Formats:

- mp4
- avi (Windows Only)
- mov
- ogv
- mpg / mpeg
- m4v
- webm (Linux only supports webm currently)

Video Codec Information:

For most plaftforms, H.264 (typically in a .mp4, .m4v, or .mov format) is the optimal supported video codec because it offers the best cross-platform compatibility. Linux is the notable exception.

For Linux, the optimal encoding is usually a .webm container with video tracks encoded using the VP8 codec, and audio encoded using the Vorbis codec.
